

```
#include <ctype.h>
#include <stdio.h>
#include <stdlib.h>

int i = 0;
char a[20];

void T() {
    if (isalpha(a[i])) {
        printf("\nT->id");
        i++;
    } else {
        printf("\nError");
        exit(0);
    }
}

void E_() {
    if (a[i] == '+') {
        printf("\nE' ->+TE'");
        i++;
        T();
        E_();
    }

    else {
        printf("\nE' ->e");
    }
}

void E() {
    printf("\nE->TE'");
    T();
    E_();
}

int main() {
    printf("Enter the string: ");
    scanf("%s", a);

    E();

    if (a[i] == '\0') {
        printf("\nParser Accepted!\n");
    } else {
        printf("\nInput Rejected!\n");
    }
}
```
